i)

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers

have been placed of record in the file.

2. The listing of references in the specification is not a proper information disclosure

statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information

submitted for consideration by the Office, and MPEP § 609 A(1) states, "the list may not be

incorporated into the specification but must be submitted in a separate paper." Therefore, unless

the references have been cited by the examiner on form PTO-892, they have not been considered.

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the

basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 3 are rejected under 35 U.S.C. 102(b) as being anticipated by Inaba et al.

cited by applicant.

Inaba et al teach applicant's invention of a closed loop for carrying an item of equipment

(1) and a device which permits the closed opp to be adjusted in size for carrying by hand or on the

shoulder. The device or member 5 forms two closed loops (L1, L2), as claimed. Member 6 of

Inaba forms a second retaining means forming a closed loop.

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness

rejections set forth in this Office action:

Application/Control Number: 10/084,056 Page 3

Art Unit: 3727

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

5. Claims 4-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Inaba et al in view of Jerrold.

Although the second retaining means of Inaba et al doesn't permit a strand of the cord to slide, Jerrold teaches a cord securing device which secures the ends of the cord to the slide lock. To have formed the cord retaining means of Inaba et al in the manner taught by Jerrold, to reduce the length of the loop which isn't being used, would have been most obvious to one having ordinary skill in the art. With such an orientation, the member securing the ends of the cord becomes the first restraining means while the slide lock becomes the second retaining means permitting a strand to slide through the retaining means as the size of the loop is adjusted. Note Figure 7 of Jerrold which would inherently provide a passage narrower or of a smaller cross-section than the cord when in the locked position,

6. Claim 10 is rejected under 35 U.S.C. 103(a) as being unpatentable over Inaba et al in view of Teurlings..

Teurlings teaches that the length of a strap wrapped around the wrist is 40 cm. Therefore, to have made the loop of Inaba greater than 40 cm so that it might also be long enough to be carried over the shoulder or around the neck would have been obvious in view of the teaching by Teurlings.

Application/Control Number: 10/084,056

Art Unit: 3727

Claims 2, 8 and 9 are objected to as being dependent upon a rejected base claim, but 7.

Page 4

would be allowable if rewritten in independent form including all of the limitations of the base

claim and any intervening claims.

8. The prior art made of record and not relied upon is considered pertinent to applicant's

disclosure. Giacoma, III, Robertson, Strykower, Powell, Orech et al and Seron teach lanyards or

cords for holding items which have slide means for forming two loops. Adams et al and Prosen

show cord members with hooks. Lee et al and Smithson show cord securing members. Malcolm

teaches a neck strap with a length of 40 cm..

9. The following are suggested formats for either a Certificate of Mailing or Certificate of

Transmission under 37 CFR 1.8(a). The certification may be included with all correspondence

concerning this application or proceeding to establish a date of mailing or transmission under 37

CFR 1.8(a). Proper use of this procedure will result in such communication being considered as

timely if the established date is within the required period for reply. The Certificate should be

signed by the individual actually depositing or transmitting the correspondence or by an individual

who, upon information and belief, expects the correspondence to be mailed or transmitted in the

normal course of business by another no later than the date indicated.

Certificate of Mailing

I hereby certify that this correspondence is being deposited with the United States Postal

Service with sufficient postage as first class mail in an envelope addressed to:
